1. Claims 1-5 provisionally rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over claims 1-5 of copending Application No. 09/745,573. Although the conflicting claims are not identical, they are not patentably distinct from each other because applicant had broadened the scope of the claims and some elements in the claims had been changed to different term, but the meaning are the same as the term used in the copending Application. For example: "A method of protecting erroneous data from being stored in a memory, such DATA comprising a series of data words terminating in a Cyclic Redundancy Check (CRC)" had been changed to "A method for checking the Cyclic Redundancy Check (CRC) of DATA, such DATA comprising a series of data words terminating in a CRC portion"...; and

"detecting whether such data word at the output is corrupt" this had been changed to "checking the output to determine whether there has been a corruption".

This is a provisional obviousness-type double patenting rejection because the conflicting claims have not in fact been patented.

2. Applicant's arguments with respect to claims 1-5 have been considered but are moot in view of the new ground(s) of rejection.
